The most disruptive change from Photoshop 2015 to 2017 might come at the expense of a familiar name. **Adobe**, one its subsidiaries, filed a lawsuit last year against Microsoft over alleged breaches of industry standards for file formats. Essentially, the company alleges the Redmond giant came up with a new file format known as.pngcrush that interferes with the creation of high-quality.png graphics. Adobe wants the US Federal Court to issue an opt-out injunction and "kill order" that would shut down.pngcrush on Windows until the company submits a program that solves the issue. The company also wants Microsoft to remove the ability to save images with.pngcrush on Windows. Initially, the lawsuit was filed in February 2016, and a very preliminary court ruled Microsoft could block the format if it posed a "substantial threat" to digital imaging. With the June 15, 2017, ruling, the court extended the ban to iOS. An Adobe M1 webpage(Opens in a new window) details the company's progress in moving software to the new hardware platform. Unlike Premiere Elements, Photoshop Elements is available on the Mac App Store, which simplifies installation, updating, and moving the app to another computer.
